WELLNESS EXAM CHECKLIST

PET NAME: _____

OWNER: _____

DATE: _____ AGE: ____

Healthy pets start with preventive care

QUESTIONS OR CONCERNS?

Ask you veterinary team which vaccines and tests are due, and how often you pet should be screened.

A FEW THINGS TO BRING

- Previous vaccine records
- Current medications and supplements
- Recent changes in appetite, energy or behavior
- Questions about pet's lifestyle and exposure

IMPORTANT NOTE

This checklist is an educational discussion guide and does not replace examination or individualized veterinary recommendations

YOUR PETS' WELLNESS VISIT

Preventive care is personalized. Your veterinarian can help choose the right services based on your pets age, health, lifestyle, location and vaccination history.

AT THE VISIT, DISCUSS

- Which vaccines are due
- Exposure to other dogs or wildlife
- Tick and mosquito risk
- Recommended screening test
- Timing for the next visit

CORE VACCINES

ESSENTIAL PROTECTION

Rabies

A viral disease that affects the nervous system and can cause serious illness or death. It can spread to people through bites or exposure to infected saliva. Rabies vaccination is required by law.

DHPP

A combination vaccine that helps protect against distemper, infectious canine hepatitis (adenovirus), parvovirus and parainfluenza. These diseases can affect the respiratory, gastrointestinal, liver and nervous systems.

Leptospirosis

A bacterial infection that can affect the kidneys and liver and may be life-threatening. Pets can become infected through contact with urine from infected animals or contaminated water and soil. It can also spread to people.

ADDITIONAL & LIFESTYLE VACCINES

BASED ON INDIVIDUAL RISK & EXPOSURE

Bordetella

Helps protect against Bordetella bronchiseptica, one cause of infectious respiratory disease (often called kennel cough). Commonly recommended for that board, attend daycare, visit grooming facilities or spend time around other dogs.

Lyme

Helps protect against Lyme disease a tick-borne bacteria infection that can affect the joint, kidneys and other body systems. May be recommended for dogs with tick exposure, especially where Lyme Disease is common.

Canine influenza (K9 flu)

Helps protect against canine influenza, a contagious viral respiratory disease. May be recommended for dogs that board, attend daycare, visit dog parks or regularly interact with other dogs.

PREVENTIVE SCREENING

SCREENING & EARLY DETECTION

Heartworm test

Screens for heartworm infection. Testing preventive care, even for pets receiving heartworm prevention. Your veterinarian may also recommend screening for tick-borne diseases based on your pet's risk and location.

CBC/CMP

A complete blood count (CBC) evaluates red blood cells, white blood cells and platelets. A chemistry panel (CMP) evaluates organ-related value and measures such as electrolytes and glucose. Baseline bloodwork can help identify changes early and is especially useful as pets age.
